1. Petroleum odor in S-2A. 2. Sample S-2B was tested for electrochemical properties. 3. Augered through septic leaching field. 4. Afterberg limit tests were conducted on sample S-4. 5. Groundwater observation well installed in completed borehole. Casing slickup 0.86 meters.																																																													
All depth measurements are approximate. Stratification lines represent approximate boundary between soil types, transitions may be gradual. Water level readings have been made at times and under conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the time measurements were made.
