

George / Chris,

In reference to the StockBridge VT project noted above, we are unsuccessful in finding any of the MC18 x 18.7 (MC200 x 27.9) in stock anywhere and they need a minimum order of 100 tons to roll at the mill.

Casco Bay Steel Structures request that this be changed to either a CB x 18.75 (2-1/2" flange in lieu of a 3" flange) or a MCB x 21.4 (has a 3-1/2" flange in lieu of 3" flange)

This would be at no additional cost to the State.

Please advise which size channel is acceptable to procure.
