

SCOTT BRIDGE

Longest Wooden Span in Vermont

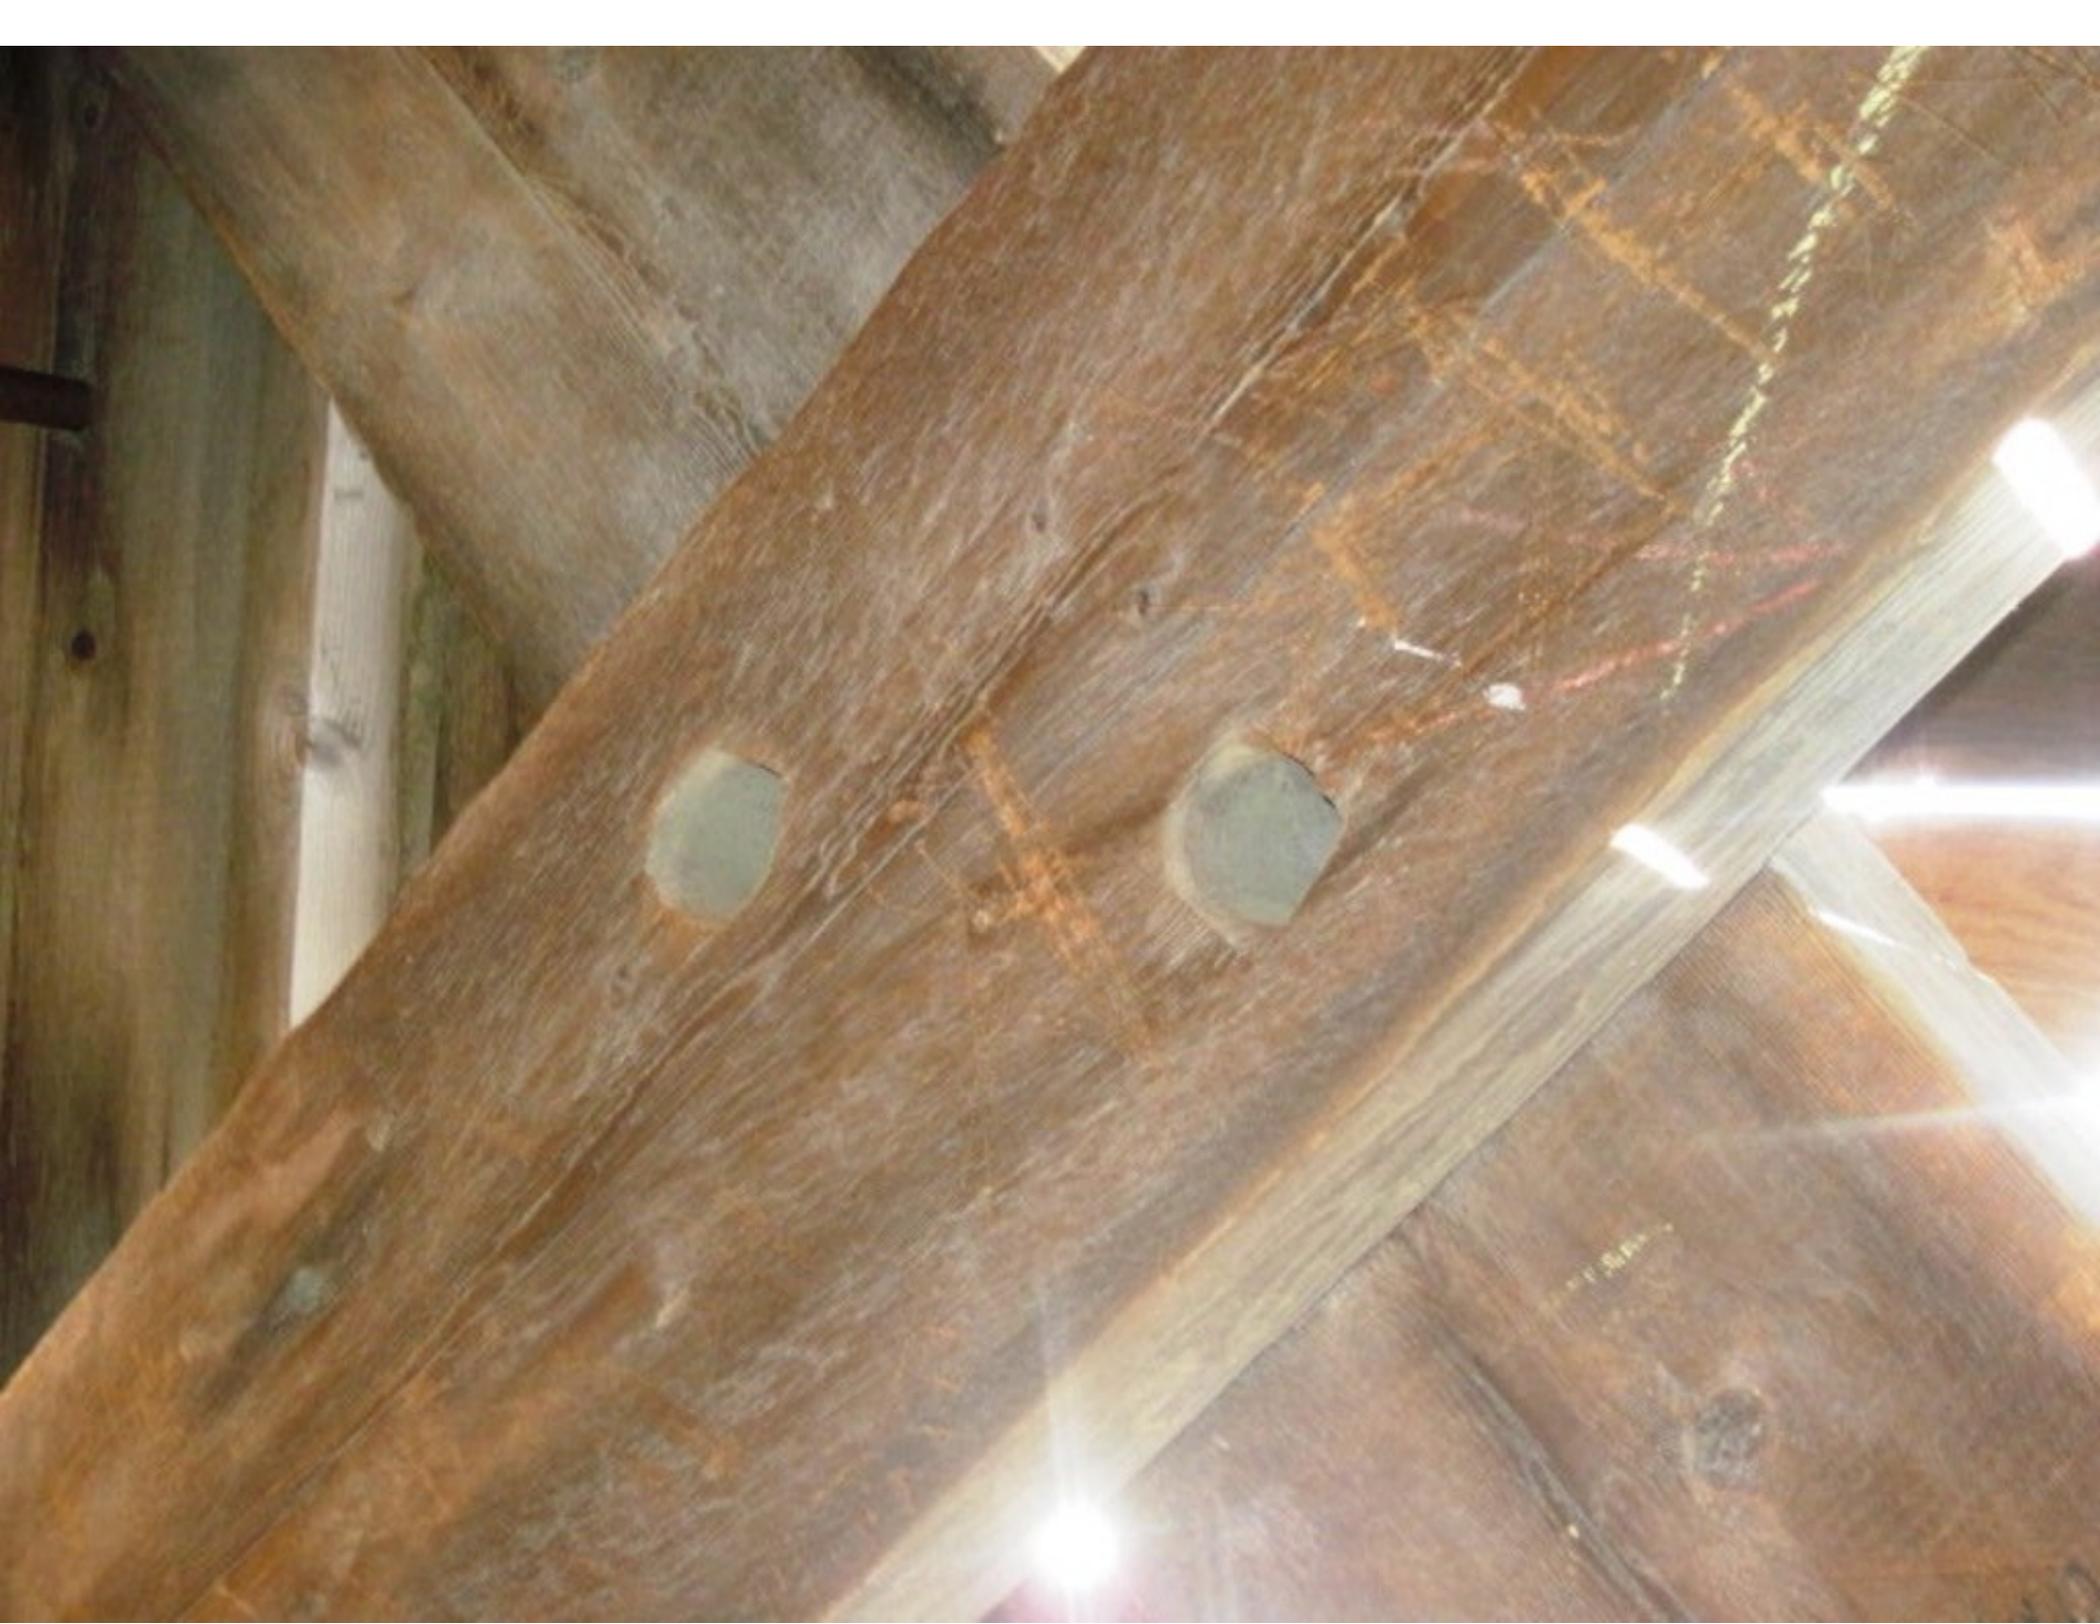

This 177' bridge, built in 1872 by Horace Claiborne, consists of five long span trusses and a 100' truss between them. The bridge was the longest covered span in Vermont. In 1988 a renovation plan was recommended to provide support for another century by strengthening the bridge with the addition of a reinforced base with six tie rods.

SCOTT BRIDGE

Longest Wooden Span in Vermont

This 277' bridge, built in 1870 by Harrison Chamberlin, consists of two king post trusses and a 166' Town lattice truss. The latter was the longest wooden span in Vermont; in 1981 a concrete pier was constructed to provide support. An earlier attempt to strengthen the bridge with the addition of a laminated bow arch was not successful.
