HOLMES' STEAM ENGINE
This engine was built by the Holmes family in the 1850s and was used to power a sawmill. It is one of the few remaining examples of this type of engine in the region. The engine is made of cast iron and is a fine example of early American engineering. It was used to power a sawmill that operated from the 1850s to the 1880s. The engine is a fine example of early American engineering and is a valuable historical artifact. It is one of the few remaining examples of this type of engine in the region.
