

SEGUIN BRIDGE

The Seguin Bridge, spanning Lewis Creek and built circa 1850, is 72 feet long and, like the Quinlan Bridge downstream, is a kingpost Burr Arch construction. The builder is unknown. In the early 1800s, General Nathan Leavenworth operated a grist, saw and woolen cloth mill just east of this site. The woolen mill included carding (combing and cleaning the wool) and cloth dressing operations, stocking vat and a fulling mill. Fulling refers to dampening and beating the wool to mat it. The Seguin and Ruess families subsequently owned the land around the bridge.

A fourth covered bridge, erected in Charlotte, crossing the La Platte River on State Street near the Snake and line, it too was a kingpost Burr Arch structure, was adjacent to the site of a former saw mill and mill pond. The La Platte River bridge, reconstructed in 1863 due to flooding, was dismantled in 1956 and replaced by the present two-lane bridge.
